DETAILED ACTION

Acknowledgement is made of the receipt of applicant's amendment and remarks filed October 10, 2002.

Acknowledgement is made of the cancellation of claims 8-14, 21, 25 and 26.

Claims 16-20 and 22-24 are pending in this action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order

for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 16-20 and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cooper (US 5,051,408). The claims are directed to a mixture of dietary fibers and methods of using the dietary fibers to treat, prevent and inhibit systemic infections in humans or vertebrates who are at increased risk of developing systemic infections.

Cooper teaches a gamma inulin composition that has been shown to be useful against infections with microbes, worms, or parasites (column 12, lines 4-11). The referenced inulin preparation can be administered in oral or rectal forms (column 12, claim 10). Cooper teaches a composition that is basically the same as that recited in the claims, except that it does not expressly disclose the claimed dosage amounts. While the reference is silent regarding percent weight of the inulin, differences in concentration will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration is critical. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. *In re Aller*, 220 F.2d 454, 105 USPQ 233, 235 (CCPA 1955).

Cooper does not expressly disclose the average degree of polymerization of the inulin. It is the position of the examiner, however, that this parameter fails to impart

a patentable characteristic. What is the criticality of utilizing inulin with this degree of polymerization?

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 20 contains the language "and/or".
Correction is requested.

Conclusion

No claims are allowed at this time.
